

# TAC Vista Server

## Video Integration

TAC Vista Security is a new solution that allows you to have a single, integrated approach to building management and security from Schneider Electric, a world leader in building automation.

TAC Vista Security combined with TAC Vista for building management makes both of these critical systems – building security and management – easier to manage and more cost-effective to own. Furthermore, each system gains power and functionality by being part of a total approach to building operations.

TAC Vista Security is a Schneider Electric product. Schneider Electric works as your partner to improve and facilitate cost-effective building management and security.

The Video Integration module described in this document is easily and effectively integrated with camera surveillance equipment. Integration includes data sharing and user control. Operators can use the much appreciated TAC Vista Workstation front-end to view live and recorded video.

### VIDEO INTEGRATION IN TAC VISTA SERVER

Video can be viewed using Pelco DigitalSENTRY video equipment. The video view in TAC Vista Workstation can display live and recorded video in a number of different camera layouts. Pan, tilt and zoom (PTZ) are controlled from the video view. Video recording can be triggered by an alarm or started and stopped manually.

Recorded video can be played back in fast mode or frame-by-frame for any given interval.

Snapshots can be taken of live and recorded video. The view can be linked to alarms in the alarms list, events in the event list, and to graphics.
